

## "Event - HTML template"

Created: 12/1/2015

By: [magethemes](#)

Email: [support@mage-themes.com](mailto:support@mage-themes.com)

Thank you for purchasing our template. If you have any questions that are beyond the scope of this help file, please feel free to email via our user page contact form [here](#). Thanks so much!

## Table of Contents

- How to setup your new template
  - Upload to your server
  - Header area
  - Topics
  - Contact us popup form
  - Footer
- HTML Structure
- CSS Files and Structure
- PSD Files
- Sources and Credits

## How to setup your new template

Thank you for purchasing our template! If you need help with setting up this HTML template we are available for freelance work, feel free to contact us using our profile page [here](#) but we are sure that this will be easy enough for you, so lets start!

## Upload to your server

First you need to upload files from theme folder inside download package to the root of your server, in perfect case it should be empty if not it is usually fine to delete whatever you have there, just be sure it is the root of your server, double check this with your hosting provider customer support if you are not sure.

You can edit your files directly on server or locally on your computer. Please open index.html file using preferred editor, you can of course use simple text editor.

## Header area

On line 64 in index.html file you will see html comment `<!-- header -->` this is where header section starts, it ends with closing comment `<!-- header ends! -->`. You have several section in header to amend:

- Menu
- Container
  - Logo
  - Subtitle
  - When
  - Where
  - Register

## Menu

By default logo is hidden on templates, to enable it you need to find comment `<!-- menu -->` on line 67, then you need to remove HTML comment from

```
<!-- menu -->
<!--div class="menu">
...
</div-->
<!-- menu ends! -->
```

to

```
<!-- menu -->
<div class="menu">
...
</div>
<!-- menu ends! -->
```

then inside menu list you need to amend `li` tags content to change menu names, please dont amend `href` value if you dont amend corresponding anchor.

Here you can change title of menu items, for example you can change "Services" to just "Our Services" or "Our Story", "Story" etc. you got the idea.

## Logo

On line 85 you will see this line:

```
<h1><a href="#">The Annual Conference 2015</a></h1>
```

Just amend text inside it and you will change name of your event, or insert image inside link to add graphic logo instead of heading.

On the top of the file there is also title tag on line 6, here you also need to amend Company name and/or slogan:

```
<title>The Annual Conference</title>
```

If you want to change font size in .css file you will need to find this line:

```
.header h1 {}
```

## Subtitle

On line 90, you can remove URL if you don't need it

```
<p class="subtitle">1 track, 3 conference days, 4 workshops, 10 excellent  
speakers and <strong><a href="#">just 300 available seats</a></strong>.</p>
```

## When, where, register

Look for comments <!-- when -->, <!-- where --> and <!-- register --> simply change text inside proper tags, on register link there is href which leads to proper anchor on page, it will slide to it, don't remove it if you don't amend anchor link, it will not work any more.

## Topics

Look for comment <!-- topics --> on line 136, then you can amend content and topics itself inside single topics marked with comment <!-- single topic --> this piece of code represents

```
<i class="fa fa-code fa-2x"></i>
```

Font awesome icons which you can find here <http://fontawesome.github.io/Font-Awesome/icons/> just replace class and new icon will show up.

## Speakers

Look for comment <!-- speakers --> on line 136, then you can amend content, there is featured speaker and list of speakers, for featured look up for comment <!-- featured --> on line 181, image

for featured speaker is sized on 590 x 490 pixels. Size of single speaker, just look for comments starting with `<!-- speaker -->` are sized on 295 x 295 pixels.

## Schedule

Looks up for comment `<!-- schedule -->` on line 304.

## Registration

Starting at comment `<!-- registration -->` on line 651, please note that registration form is just HTML mockup.

## Contact us popup form

On line 591 there is a comment `<!-- Contact -->` this is where Contact us sections begins.

Let start with contact form, there are `placeholder` attribute if you want to select text in inputs field, maybe if you need to translate in different language for example.

Text on button can be changed on this line:

```
<button name="submit" type="submit">send message</button>
```

Simple amend text saying "send message".

Important thing to do is to change email on which you will receive emails from this form.

This is first time we need to go outside of our index.html file, you will need to open contact.php file, you will see this:

```
<?php
if( isset( $_SERVER['HTTP_X_REQUESTED_WITH'] ) && (
$_SERVER['HTTP_X_REQUESTED_WITH'] == 'XMLHttpRequest' ) ) {

    $to = "support@mage-themes.com";
    $name = $_POST['name'];
    $subject = "Form submission";
    $message = $name . " wrote the following: " . "\n\n" . $_POST['message'] .
"\n\n" . $_POST['email'];
    $headers = "From: no-reply@mage-themes.com"."r\n" . "Reply-To:
no-reply@mage-themes.com"."r\n";
    mail($to, $subject, $message, $headers);

} else {
    header("Location: index.html");
    exit();
}
?>
```

Dont worry about this right now, you need to change just couple of things, email here:

```
$to = "no-reply@mage-themes.com";
```

From no-reply@mage-themes.com to you email, for example [office@your-company.com](mailto:office@your-company.com) so it will look like this:

```
$to = "office@your-company.com";
```

There is also one more email no-reply@mage-themes.com just locate it and replace it with you no-reply email.

Almost there, we need to open one more file, please go inside scripts folder and open file named form.js on line 58 there is line:

```
$('#p.message').html('Contact Form Submitted! We will be in touch soon.').fadeOut(2500);
```

If you want or you need this template on some other language you will need to Change this line 'Contact Form Submitted! We will be in touch soon.', don't forget to keep quote marks on both sides.

## Google Map

On line 750 there is comment `<!-- do not remove, needed for Google Map -->` there is no need to amend this part of code but its time to point Google marker to you address! Time to shift satellite positions!

On line 17 near the top of our index.html file there is a comment `<!-- Google Map -->` there you will see this line:

```
var myLatLng = new google.maps.LatLng(-37.817314, 144.955431);
```

you need to change this part

```
(-37.817314, 144.955431);
```

This is address of your place, just like numbers on X and Y axis to make is simple

There are many services where you type in your address and you get this numbers, you can google out one or you can use this one for example <http://itouchmap.com/latlong.html> there you will get Latitude and Longitude of you address.

Just enter address in input field and press go, under the map on the left you will have your magic numbers, just replace them and you are done. Little bonus if you want to zoom in or zoom out your map you just change this number `zoom: 16` The greater the number the greater the zoom is of course.

You can enable zooming of map by removing this line:

```
scrollwheel: false,
```

or changing it to `true`.

## Footer

On line 828 there is a comment `<!-- footer -->` this is where footer starts, you can change the name of company in `<a>` tag or maybe add the year next to copyright.

## Social networks

On line 805 you will see html comment `<!-- social -->` this is where Social networks part start here you will need to insert all your social networks profiles.

If you want to remove for example pinterest simple delete complete `<li>` tag containing it, so it should look something like this:

```
<a href="#"><i class="fa fa-facebook"></i></a>
<a href="#"><i class="fa fa-twitter"></i></a>
<a href="#"><i class="fa fa-google-plus"></i></a>
<a href="#"><i class="fa fa-linkedin"></i></a>
```

You will need to write down links to your social profiles into `<a>` tag inside `href=""` attribute, so it looks something like this:

```
<a href="https://twitter.com/envato" class="fa fa-twitter fa-2x"></i></a>
```

Just insert link inside `href` attribute, if you don't need any of those simple delete complete `<li>` tags, remember if you want you can use `target` attribute.

Also notice comments so you can easily see which one is which, those codes represents icons from [Font Awesome](#), you can chose new icon by replacing class here is the [cheat sheet](#) with list of all icons.

You will also need to replace image inside `<img>` tag, our images are 90px by 90px but you can play with it.

That is it, you have your social profiles up and running! Woo end of file! Great work, continue reading for some more template related info. Thanks!

## HTML Structure

This theme is one page template, one column design, HTML comments are provided marking starting and endings of sections. There are also meta tags for you to amend:

```
<meta name="Keywords" content="">
```

```
<meta name="Description" content="">
```

You can also amend `<title>` tag which is on line number 6.

## CSS Files and Structure

Included files are:

- `style.css`
- `style.scss` this is the [SASS file](#) which generates the `style.css` file
  - `_variables.scss`
  - `_placeholders.scss`
  - `_mixins.scss`
  - `_imagelightbox.scss` this is addition for [FlexSlider 2](#)

## PSD Files

We have included PSD file with this theme:

- `event.psd`

## Sources and Credits

We've used the following images, icons or other files as listed.

- Images in the preview files are not included
- Font Awesome <http://fontawesome.github.io/Font-Awesome/>
- FlexSlider 2 <http://flexslider.woothemes.com/dynamic-carousel-min-max.html>
- SASS <http://sass-lang.com/>

---

Once again, thank you so much for purchasing this theme. As I said at the beginning, we will be glad to help you if you have any questions relating to this theme. No guarantees, but we'll do our best to assist. If you have a more general question relating to the themes on ThemeForest, you might consider visiting the forums and asking your question in the "Item Discussion" section.
